FSI Compliance Committee Meeting 12th September 2018

- Track report
- Project report
- Listeriosis outbreak
 - Current situation
 - NICD: Micro history data with industry
- HF011 and Salt Reduction

HFOI update

- Two years have passed since the HFOIs were launched by the CGCSA and its members to help fight the rise of obesity and non-communicable diseases in South Africa.
- The commitments made were for a four-year period, ending in 2020, leaving the industry with another two years to reach the targets set out.
- To date, updates on how the industry is tracking against the commitments made, have been provided to the Department of Health through the CGCSA.

HF011 update continued

- The first meeting took place on the 6th June with QSR members.
- The next meeting was scheduled for the 4th September for Manufacturer members and the last meeting will take place on the 5th December.
- To raise the profile of this work, speakers will be invited to the CGCSA Summit to discuss the progress made so far and to discuss the impact made.

Sodium reduction regulations update

- It was brought to our attention that there were discrepancies between the industry and the Department of Health's sodium test results, where products on the shelf were not seen to meet the requirements of the regulations.
- A meeting was held between the relevant stakeholders in August last year to discuss the potential causes of these discrepancies. Outcomes of this meeting included the Department of Health publishing a necessary amendment to these regulations, as well as further meetings with technical experts regarding sodium testing.

Sodium reduction regulations update continued

- This has resulted in the development of sodium test method guidance document, drafting of a sampling guidance document and a proposal for laboratory proficiency testing to take place for the Department of Health laboratory, as well as laboratories that the industry uses for sodium testing.
- Discussions between the relevant stakeholders, including the Department of Health, are underway to conduct proficiency testing.
- Our intention is that this work will help determine where the discrepancies lie and that these will be addressed.

General

- R.429 update
- Feedback on HF011 meetings with DoH
- Progress on Preservatives & Anti-oxidant Regs (discrepancies e.g. certain food categories as identified in Codex GSFA are not included in these regulations Out of date foods - Perhaps Food products that have past their best before date but that pose no safety risk and the difference between the different dates that consumers may find on pack
